Website & app development

We design and build company websites, Frappe UI customer portals, web applications, and Android and iOS apps, then maintain the servers they run on. Arctic OS Mobile, the Android app for our cold storage ERP, is built by the same team.

PLATFORMS BUILT	LANGUAGES SUPPORTED	ACCOUNT OWNERSHIP	POST-LAUNCH OPTION
Web · Portals · Android · iOS	English, Arabic & Urdu (RTL)	Your own domain & store accounts	Server patching, SSL & backups

Scope & deliverables

- **Company & product websites:** Fast, mobile-first websites structured around clear enquiries, SEO hygiene and low page weight.
- **Custom web applications:** Browser tools built around registers, multi-step approvals, role permissions and live reports.
- **Customer & dealer portals:** Secure self-service logins where clients view stock, statements, invoices and service tickets.
- **Android & iOS mobile apps:** Field, floor and customer apps supporting camera barcode scanning and patchy connectivity.
- **System integrations & server care:** Clean APIs into your ERP, accounting or WhatsApp workflows, plus ongoing Linux/NGINX care.

When clients bring us in

- Your current website is slow, outdated on phones or disconnected from how enquiries are handled.
- Customers message staff all day asking for stock balances, ledger statements or order status.
- Field or warehouse teams need a focused phone app tied straight into your central database.

How an engagement runs

- **1. Scope & user flows.** Define user roles, data fields and exact screens in writing before code is written.
- **2. Interface design.** Agree layouts and workflows up front so staff and customers find every screen intuitive.
- **3. Staged build & testing.** Deliver working builds you can test on real phones and browsers as each milestone completes.
- **4. Launch, store publish & care.** Deploy to your server or app stores, train staff, hand over docs and maintain the server if chosen.

Software surfaces & post-launch server maintenance

DELIVERABLE / CARE AREA	WHAT IS INCLUDED
Public websites	Responsive layout, structured schema, fast asset delivery and direct enquiry routing
Web portals & apps	Role-based login, audit logs, voucher/statement views and exportable operational registers
Android & iOS apps	Native/cross-platform mobile builds, QR/barcode camera scanning and API sync
Server housekeeping	OS security patches, SSL renewals, uptime alerts and tested database backups on your server

Commercial terms & confidentiality

Quoted per project against a written screen and feature scope, with staged milestone payments. You keep ownership of your domain name, cloud hosting account and Apple/Google developer accounts.

Next step: Request a scoped web or mobile quote at umaish.com/quote?service=web or book a 30-minute call at umaish.com/book.
